5. Prices

# 1. Invisalign Process

## The Consultation

During the Invisalign Consultation, we will -

- Assess you for suitability
- Provide you treatment options
- Discuss likely treatment duration
- Give you a fixed treatment price

We will also take records of your teeth and conduct an assessment of your teeth and gums.

# 1. Invisalign Process

## The ClinCheck

- Once you are happy to proceed, we will submit your details to Invisalign
- **ClinCheck** - Invisalign will run their digital treatment plan software to simulate your smile on completion of the treatment
- You can view the ClinCheck results to see what your smile will look like on completion
- Invisalign will then custom manufacture aligners to straighten your teeth

ClinCheck usually takes 2 weeks. Making aligners typically takes 4 weeks.

# 1. Invisalign Process

## Living With Invisalign

Invisalign aligners are very discreet and virtually invisible to others

- Aligners need to be worn 22 hours a day
- They should be removed for eating and drinking
- Each aligner is worn for 7-14 days and then the next one inserted

# 1. Invisalign Process

## Treatment Duration

Invisalign aligners are designed to have minimal impact on your lifestyle – whether that be socially or at work.

- Most cases take 4-6 months with correct wear and use of aligner chewies
- Complex cases can take 15 months

## 2. Smile Refinement

### Refinement At End of The Treatment

Your teeth should now be aligned and the bite correct, reflecting the ClinCheck results. You can further perfect your smile with -

- **Composite bonding** is common at this stage to correct minor teeth imperfections that remain - such as uneven edges
- **Veneers** also help to reshape the odd tooth to complete a perfect smile

Composite Bonding.

# 3. Retention

## Maintaining Straight Teeth

This is the most important part, otherwise your straightened teeth won't last. There are 3 retention options

- Essix retainers
- Vivera retainers
- Fixed retainers

# 3. Retention

## Essix Retainers

- These are basic retainers that most dentists supply
- They need to be worn every night or the teeth will move back
- Some teeth may still move a little

# 3. Retention

## Vivera Retainers

- They are stronger, will last years and are the best retainers that you can buy
- They come as sets of 6 retainers - 3 upper and 3 lower
- They are made by Invisalign

# 3. Retention

## Fixed Retainers

Problem with removable retainers is they won't totally prevent rotations from relapsing and teeth can move during the day when you aren't wearing them.

vivera<sup>®</sup>  
retainers

## Best Practice

- Fixed retainers to hold the front 6 teeth long term
- + 3 sets of Vivera retainers to maintain the arch width of the back teeth
- Usually only a lower fixed retainer is recommended

Case 2

# 5. Prices

## Fixed Treatment Prices

Invisalign (1-7 aligners)	£1,595
Invisalign (8-14 aligners)	£2,595
Invisalign (15-30 aligners)	£3,295 - £3,595
Fixed Retainer (each)	£250
Vivera Retainers (3 set)	£460

All Invisalign treatments come with complementary Zoom (3 gel) teeth whitening and Essix retainers worth a total of £299.

# 5. Payment Options

## Self Funded or 0% Finance

### Self Funded

- £350 (non-refundable) – once you decide to go ahead
- £950 – to manufacture the aligners
- Balance paid in equal instalments over the duration of the treatment.

### 0% Finance

- £350 (non-refundable) – once you decide to go ahead
- Balance paid using 0% Finance over 6-12 months
- E.g. £1,595: £350 + £104/month over 12 month

We will send a link to your phone. Finance application is completed and approved in 2-3 minutes on your phone.

Spread the cost with 0% finance.

We guarantee to impress you with exceptional patient care and service.

Experience you can trust.
